Nicolas Delecrode Zampieri

Software Developer

São Paulo, Brazil | nicolas17delecrodepf@gmail.com | github.com/ndelecrodev | ndelecrodev.github.io/curriculum_website

SUMMARY

Developer focused on APIs and web applications in Python (FastAPI and Django), plus Java with Spring Boot. I build integration pipelines on top of REST APIs and applications with layered architecture, data validation and automated tests. I work well in a team, learn independently and treat feedback as the fastest way to improve. Open to conversations and opportunities across different areas.

PROJECTS

Task Time Sync — Jira + Clockify integration

Python, Pydantic, SQLAlchemy, Postgres, Poetry, GitHub Actions | github.com/ndelecrodev/task-time-sync

- Pipeline that consolidates Jira tasks and Clockify hours into an Excel workbook (Backblaze B2) and Postgres (Supabase), with deadline alerts on Microsoft Teams.
- Layered architecture (clients, services, integrations, models). Steps are isolated: a Jira outage does not block Clockify collection. Failures go to Sentry and a Better Stack heartbeat confirms the run finished.
- CI on GitHub Actions with pylint, black and pytest (coverage on Codecov). Scheduled daily run, with credentials stored as repository secrets.

Quimia — admin panel (team project, ExpoTech 2026)

Java, Spring Boot, Spring Security, Thymeleaf, PostgreSQL | github.com/Quimia-br/quimia-web-crud

- Panel to manage users, companies, products and disposals, with an audit trail of every change and restoration of deletions from the log, in a single transaction.
- Security: Argon2id password hashing, lockout after failed logins, CSRF protection, Content Security Policy and upload validation by file content.
- More than 160 automated tests (JUnit 5, Spring Security Test) that run without a database.

Quimia Dashboard — task and hours tracking

JavaScript, Chart.js, PostgreSQL with Row Level Security, Cloudflare Pages | github.com/ndelecrodev/quimia-dashboard

- Static dashboard with no framework and no build step, with login and access control enforced by Row Level Security in the database. Exports CSV (Excel-compatible) and XLSX.
- Protected workbook downloads through Cloudflare Pages Functions, with revocable personal keys. Storage credentials stay on the server only.

Quimia Landing Page and Task Time Sync documentation

- Responsive institutional site published at quimia.tech (HTML, CSS, JavaScript) and bilingual (PT/EN) documentation with MkDocs Material: architecture, data model and design decisions.

TECHNICAL SKILLS

Languages	Python, Java, SQL, JavaScript, HTML and CSS
Frameworks	FastAPI, Django, Spring Boot, Spring Security, Pydantic, SQLAlchemy
Data and integrations	PostgreSQL, REST APIs (Jira, Clockify), webhooks, Backblaze B2, ETL, Excel, Power Automate
Quality and delivery	pytest, JUnit, black, pylint, Git and GitHub, GitHub Actions (CI/CD), Cloudflare Pages, Codecov
Observability	Sentry, Better Stack
Soft skills	Communication, autonomy, teamwork, openness to feedback, attention to detail

EDUCATION, COURSES AND LANGUAGES

- High school — Instituto J&F, São Paulo, Brazil
- GitHub Foundations — DataCamp (in progress, 2026) • Python — Instituto J&F, 2026 • HTML and CSS — IFFRS, 2026
- Portuguese (native) • English A2, developing
